

Sacrifice variants

By C.G.S.Narayanan

Sacrifice may be defined as a voluntary offering of a piece to the opponent for capture. Sacrifices occur often as part of tactical combinations in the over-the board game. A sacrifice could also be a deliberate exchange of a chess piece of higher value for an opponent's piece of lower value. In problem chess, a sacrifice can take place in two ways- *Active sacrifice* in which a piece moves under the enemy attack or *Passive sacrifice* where a piece does not escape or not protected against the enemy attack. The three-mover is an attractive mutate illustrating active sac. where the powerful queen is given up. The motif behind the key can be seen only after the capture of the WQ.

Mate in three moves

Key 1.Qb3! waiting

1...Kg6/Kg5 2.Qg8+ Kf6/Kh5 3.Bh4/g4

1...axb3 2.Kf5 b2 3.g4!

WQ also gives the flight Kg5

The second diagram below shows white queen sacrifices on seven different squares, five of them being evacuation sacrifices. The last variation is a Nowtony sacrifice by the WN. The nuances as to how the

defences are arranged need to be closely studied.
