

Wankhede factor

Interestingly, Wankhede Stadium has produced significantly more losing hundreds than any other venue in IPL history.

There have been eight centuries scored at the Wankhede in losing causes, twice as many as the second-placed venue, the Rajiv Gandhi Stadium in Hyderabad.

A major factor is simply the frequency with which centuries are scored there. The Mumbai venue has witnessed 19 IPL hundreds, the most for any ground.

With a shorter boundary dimension and generally flat pitches, Wankhede has long been one of the highest-scoring venues in the IPL.

The high proportion of losing hundreds there, nearly 42% of all centuries scored at the venue, can likely be attributed to the dew factor, which makes bowling significantly harder in the second innings and tilts conditions further in favour of batters. That gives chasing teams a better chance of overhauling targets, directly hurting the value of first-innings hundreds.

It is also worth noting that two of the four losing centuries in chases

TABLE 2

Strike Rate (S/R)	Total Hundreds	Wins	Losses	Win Rate (%)
Under 180	43	29	14	67.4
180 - 200	30	22	8	73.3
200 - 220	28	22	6	78.6
220+	22	17	5	77.3

have come at the Wankhede.

Interestingly, all eight IPL centuries scored in Ahmedabad have ended in wins.

Individual highlights

Two batters share the record for the most losing hundreds in IPL history: Virat Kohli and KL Rahul.

Kohli has the most IPL centuries overall (nine), but three of those have come in defeats, giving him a 62.5% win rate. Similarly, three of KL Rahul's six IPL hundreds have ended on the losing side. That includes the 152 he scored against Punjab Kings in IPL 2026, the highest score by a player in a lost T20 match.

On the other hand, Jos Buttler stands out as perhaps the most impactful centurion in IPL history. All seven of his centuries in the tournament have resulted in wins.

Chris Gayle follows, with all six of

his IPL hundreds ending in victories. Among Indian batters, Shubman Gill has a 100% win rate when it comes to centuries.

Global comparison

Compared to other major global T20 leagues, the IPL ranks near the bottom when it comes to rewarding hundreds with wins.

As observed here, only the Caribbean Premier League has a lower win rate for centuries. In contrast, Australia's Big Bash League has seen centurions win 88.23% of the time, the highest among the six tournaments under consideration.

What also stands out is the difference in volume. Thanks to its earlier inception and larger number of matches per season, the IPL has produced 123 hundreds, while the Big Bash League, second on the list, has seen only 51.
