

essential to select appropriate exercises and modify them as needed.

Typical work-to-rest ratios range from 1:1 to 2:1 intervals, depending on the demands of the session. Progression is key — starting from low intensity and gradually moving towards higher intensities.

WHILE GETTING STARTED

- ✦ Execute a general warm-up.
- ✦ Start slow — pick basic and less intense movements.
- ✦ Identify a work-to-rest ratio that would be relevant to the current level of fitness.
- ✦ If using weights, make sure to choose the proper weight for the number of reps and/or time that will be required to maintain proper technique.
- ✦ Perform a proper cool-down.
- ✦ Get adequate rest between training sessions.
- ✦ Include proper recovery sessions.
- ✦ Ensure proper hydration and nutrition according to calorific need and goal.
