

Bumrah's changing equation with length balls

Bumrah length ball %

Length ball overall run rate (pacers)

Length ball: 3-5 metres from the batting crease

the gulf has never been this vast.

The difference in bowling average and economy between Bumrah and the rest has never been wider.

Across the last two seasons – the highest-scoring era in IPL history – Bumrah has conceded just 6.57 runs per over. No other bowler (minimum three wickets) has an

economy rate of under 7.

The chasm is clear even in smaller samples. Since IPL 2024, Bumrah has bowled in 25 matches. He has gone for more than the match run-rate just three times. Only once – against Delhi Capitals this season – has he conceded over 10 runs an over.

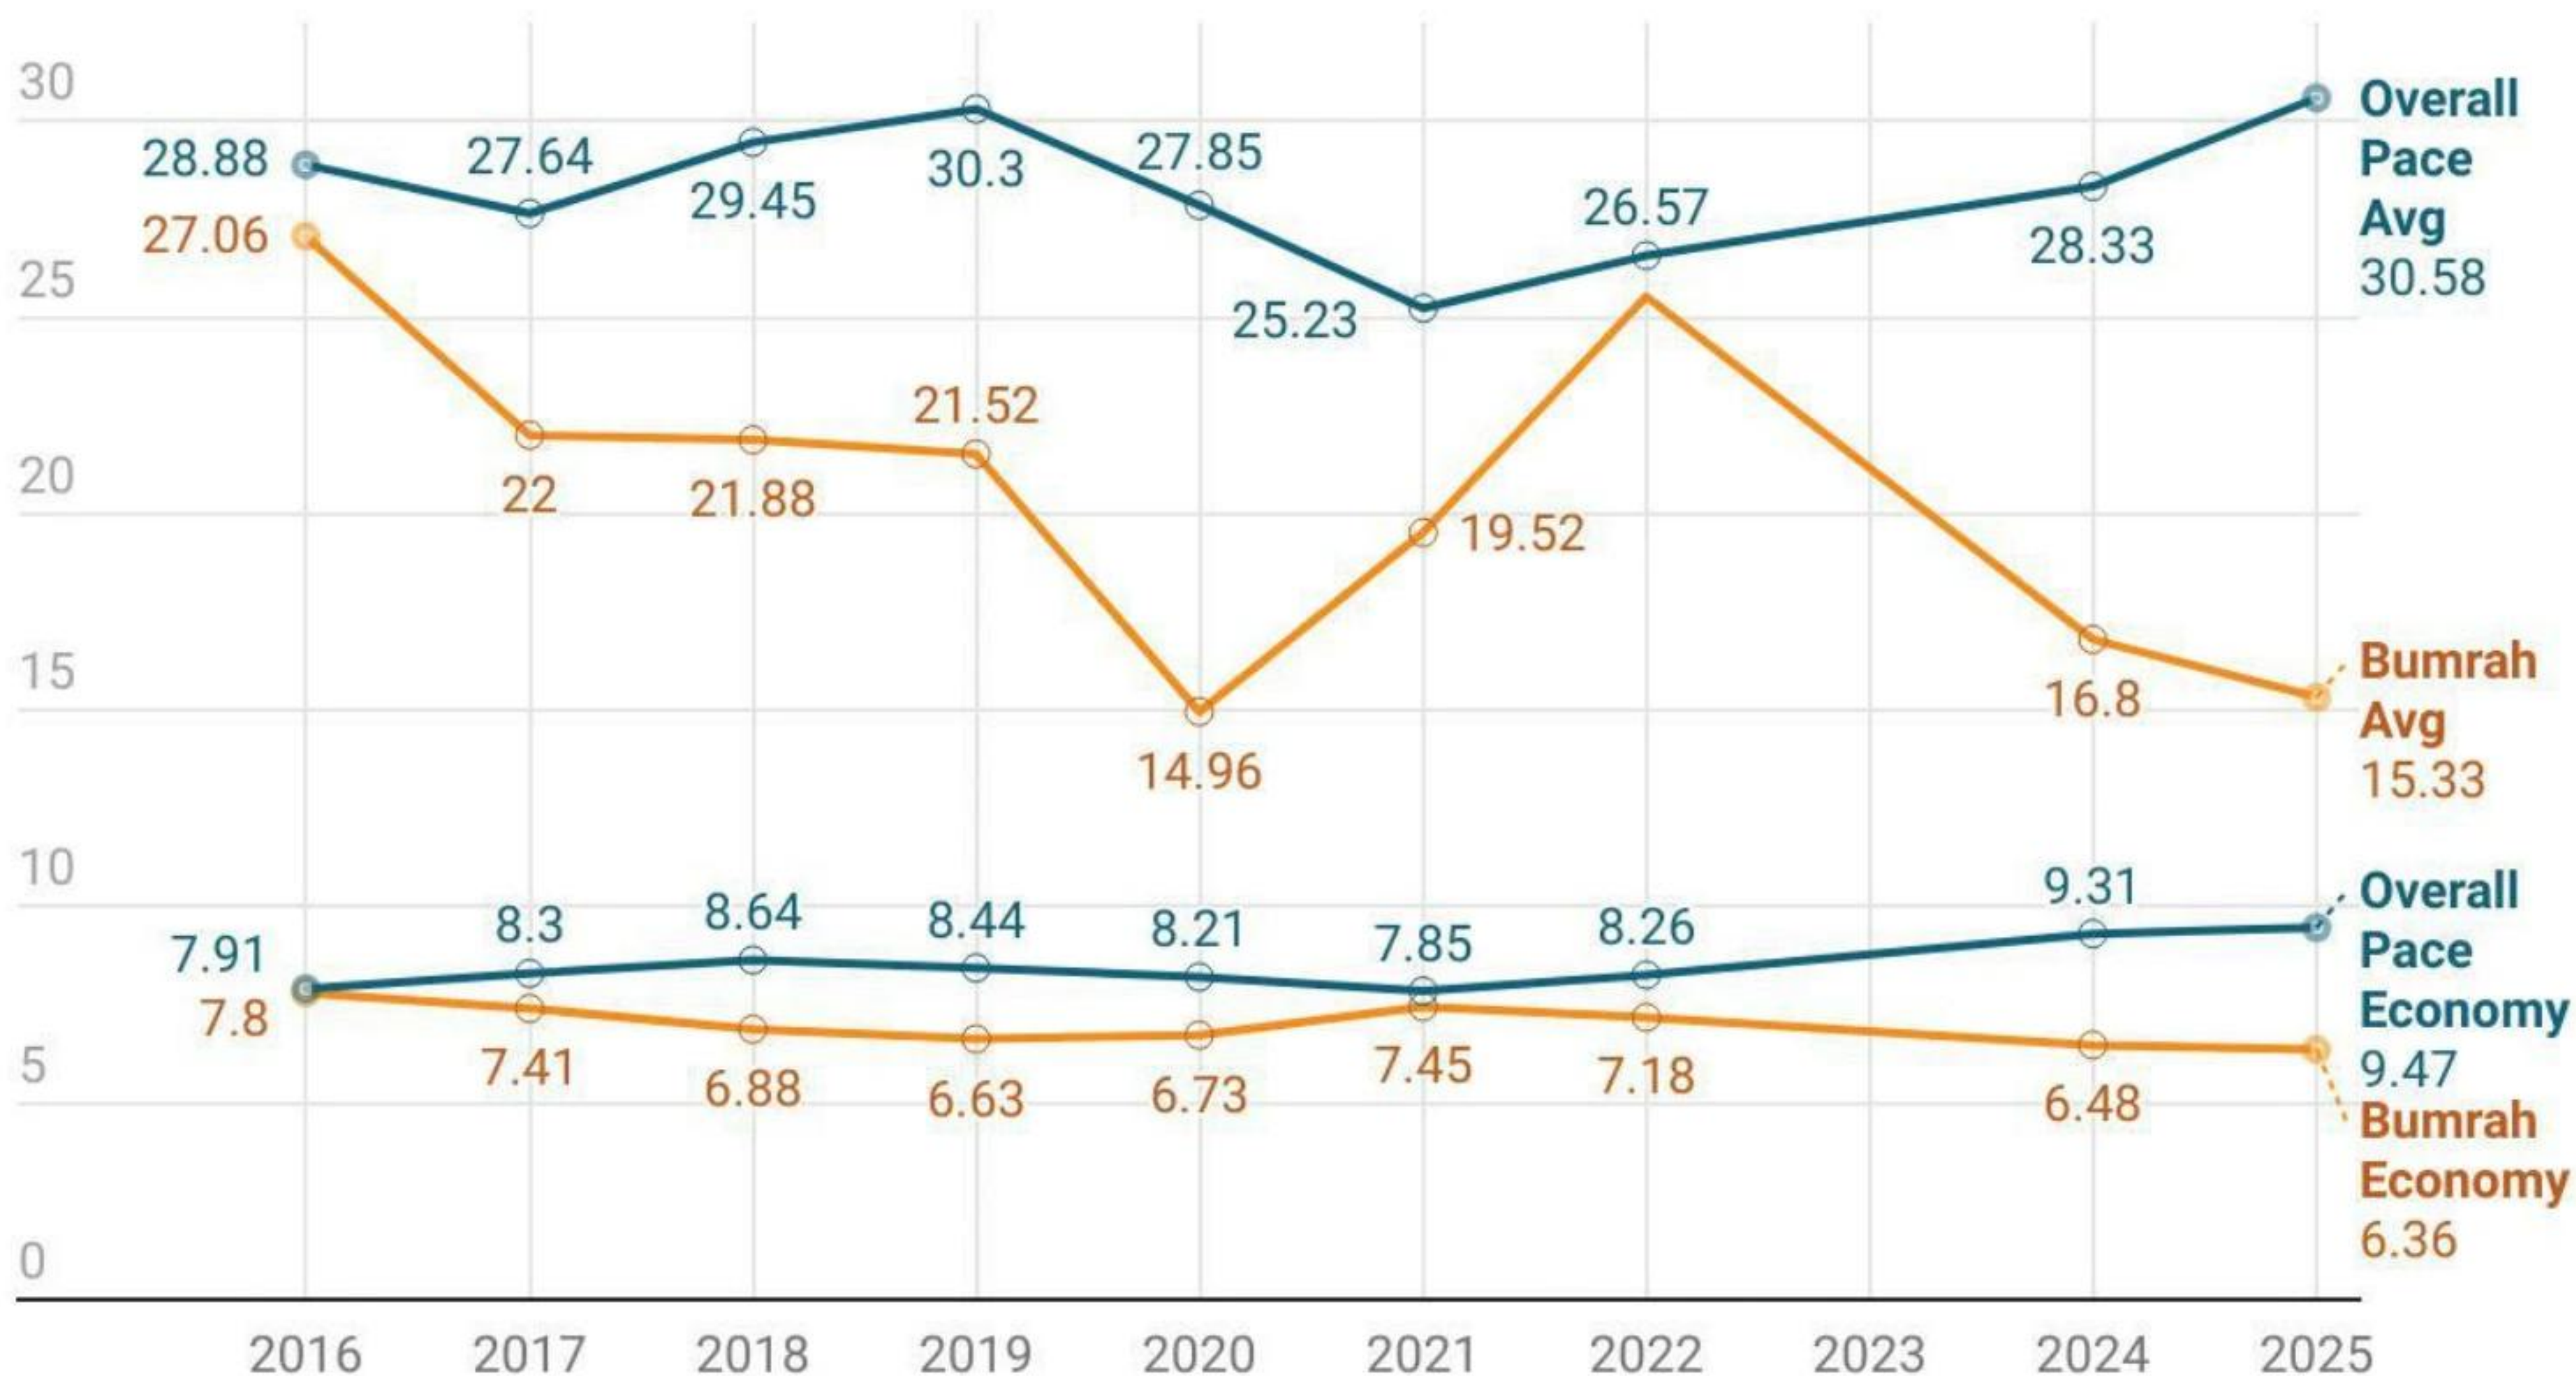

Yet, despite his sustained

brilliance, Mumbai Indians did not

make the final as it fell to Punjab Kings in the Eliminator. Notably, Bumrah was taken for 40 runs in his four overs that night.

For all the advantages afforded by his unique action, what sets Bumrah apart is his ability to redesign his approach and stay ahead of the curve.

Bumrah vs other pacers in IPL
