

Top 10 highest PowerPlay scores in IPL history

Score	Team	Opponent	Year
125/0	SRH	DC	2024
107/0	SRH	LSG	2024
105/0	KKR	RCB	2017
100/2	CSK	KXIP	2014
94/1	SRH	RR	2025
93/1	PBKS	KKR	2024
92/0	DC	MI	2024
92/1	RCB	GT	2024
90/1	KKR	LSG	2025
90/0	CSK	MI	2015

death overs (16 to 20) has witnessed a steeper dip, falling from 11.55 to 10.69. If a decline of 0.86 runs per over doesn't seem significant, consider this. After 50 matches in 2024, teams had plundered 60 runs or more in the last five overs on 38 occasions. In 2025, that number has plunged to just 15 in the corresponding period.

Consequently, the number of batters who excel during this crucial phase of the innings has dwindled. In 2024, 13 batters had scored more than 100 runs (minimum 50 balls faced) in the last five overs, while 10 boasted of a strike rate in excess of 175. Those numbers have dropped to eight and five, respectively, this season. The likes of Heinrich Klaasen, Rishabh Pant and Andre Russell have failed to replicate their ball-striking ability in 2025. While the indifferent form of some of the league's most explosive batters hasn't helped, the bowlers, aided by changes in playing conditions, have also stepped up and recalibrated their plans.

Full and straight at the death

With reverse-swing coming back into the scheme of things, partially owing to the lifting of the ban on applying saliva on the ball, the menace of the yorker has also returned. While it was the most potent weapon in the death overs last season, costing 8.95 runs an over and producing a wicket almost every 32 balls, its efficacy has drastically increased. In 2025,

between overs 16 and 20, the yorker has conceded just 6.90 runs an over and averages a stunning 12.78 runs per wicket – the best for any length during this phase of the innings. Interestingly, in 2024, the yorker had the worst average (31.69) amongst all the other lengths bowled during this phase of the innings.

The bowlers have also executed the full deliveries — considered easy pickings for batters — with greater accuracy and efficiency. The run rate against full deliveries in the death overs has dropped from 14.45 in 2024 to 10.90 in 2025, while the

average runs conceded per wicket has also fallen from 24 to 17.5.

Gujarat Titans' death-overs specialist batter Shahrukh Khan acknowledged the role of a drier ball and reverse-swing in stemming the flow of runs towards the back end of the innings.

"The ball has been changed after 15 overs... Reverse-swing comes into play, and when the ball is dry, it is not that easy for the batsmen to go after the bowlers. Death [overs] batting has not been that easy. You need to be really skilful to get the ball out of the rope. In the previous
