A study in white correction

By C.G.S.Narayanan

In white correction problems, inclusive of the tertiary and quaternary correction, one can often notice that the corrections are born out of the necessity to provide for a particular black defence and the random moves of the correcting piece do not commit nor carry any significant error. It is imperative that the random move of white itself leads to an irrevocable error which is corrected subsequently by providing for or by preventing that black move. The problem below quoted fits into this definition of an ideal white correction problem.It deservedly won the premier honours in the second ICPS-India Cements composing contest which was adjudicated by the eminent British problemist and FIDE International master and judge, Barry P Barnes,who passed away recently.

Mate in two moves

Barnes wrote:" Four prominent set mates are changed by a fine key to grant the BK a flight square at f5.Logic drives the WNe4 to f6 after the random move error of not providing for 1…exf5 which defeats the threatened 2.Qe4.The WN tries and key provide a fourth mate (one in the set play) after 1…exf5 with correction errors, in part negations of setmates. This is class white (secondary) correction which should be widely quoted".

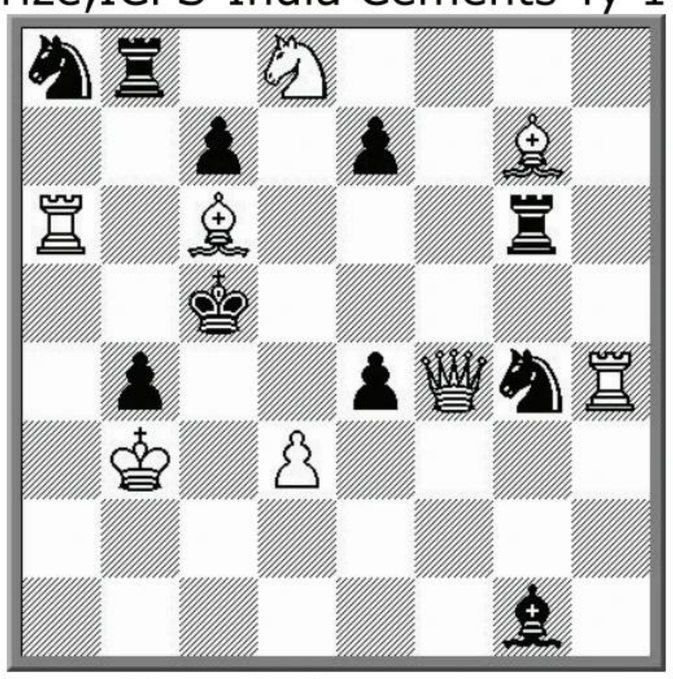

Set:1…exf5/exd5/Bf4/Bc2 2.Bf6/Re6/Qf6/Qxh2 1..Nany! (2.Qe4)exf5! 1.Neg5?(2.Qe4) exf5 3.Nf7 but 1…Bf4! (2.Qf6?)1…Ng3? exf5 2.Rxf3 but 1…Bc2! (2.Qxh2?)

Key 1.Nef6! exf5/exd5/Bf4/Be2 2.Re6/Rxd5/Ng4/Nd7.

The second diagram shows changed mates after four black interferences with a flight giving key.
