

THE T20 BLUEPRINT

With the growing influence of analysis, T20 cricket has increasingly become a role-specific exercise. Players are often picked in the format based on certain strengths and are expected to deliver on these defined functions. From PowerPlay bashers to spin destroyers in batting and new-ball handlers to yorker-nailers in bowling, these roles are slowly gaining universal definition, with T20 teams across the globe trying to formulate their Playing XIs around them. In this analysis, we look at the best players for some of these demarcated positions in the upcoming T20 World Cup. From there, we extend the observation into how teams stack up heading into the tournament.
