

ENGLAND

- Best batting team in the PowerPlay since 2024
- Only five out of 22 matches have been played in the subcontinent in this span
- Struggles to keep the economy rate in check across all phases of play

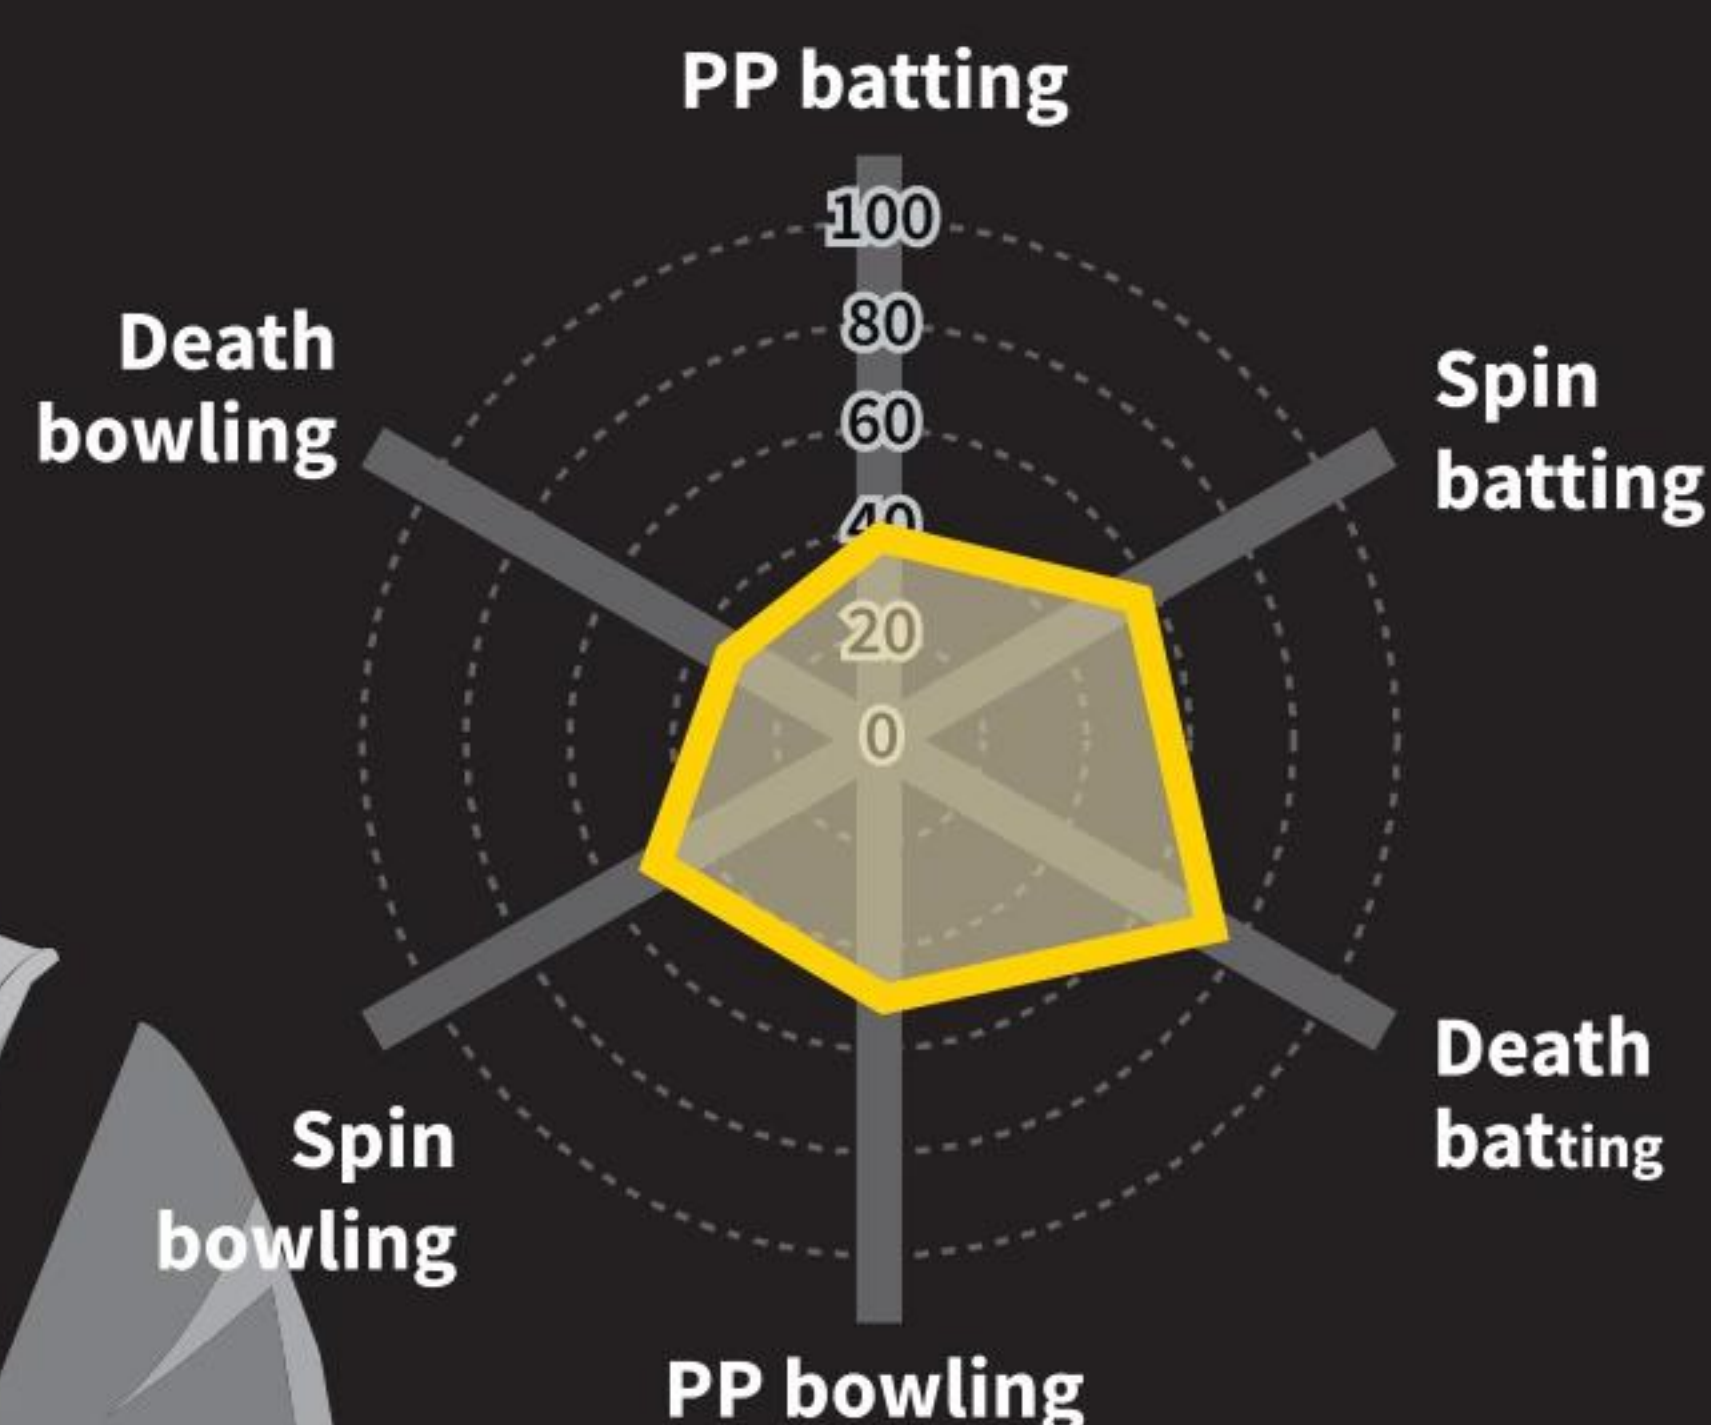

NEW ZEALAND

- One of the best batting sides against spin, only behind India and Australia
- New-ball bowling is a big positive
- Only two out of 26 games since 2024 were played in the subcontinent ahead of the India series

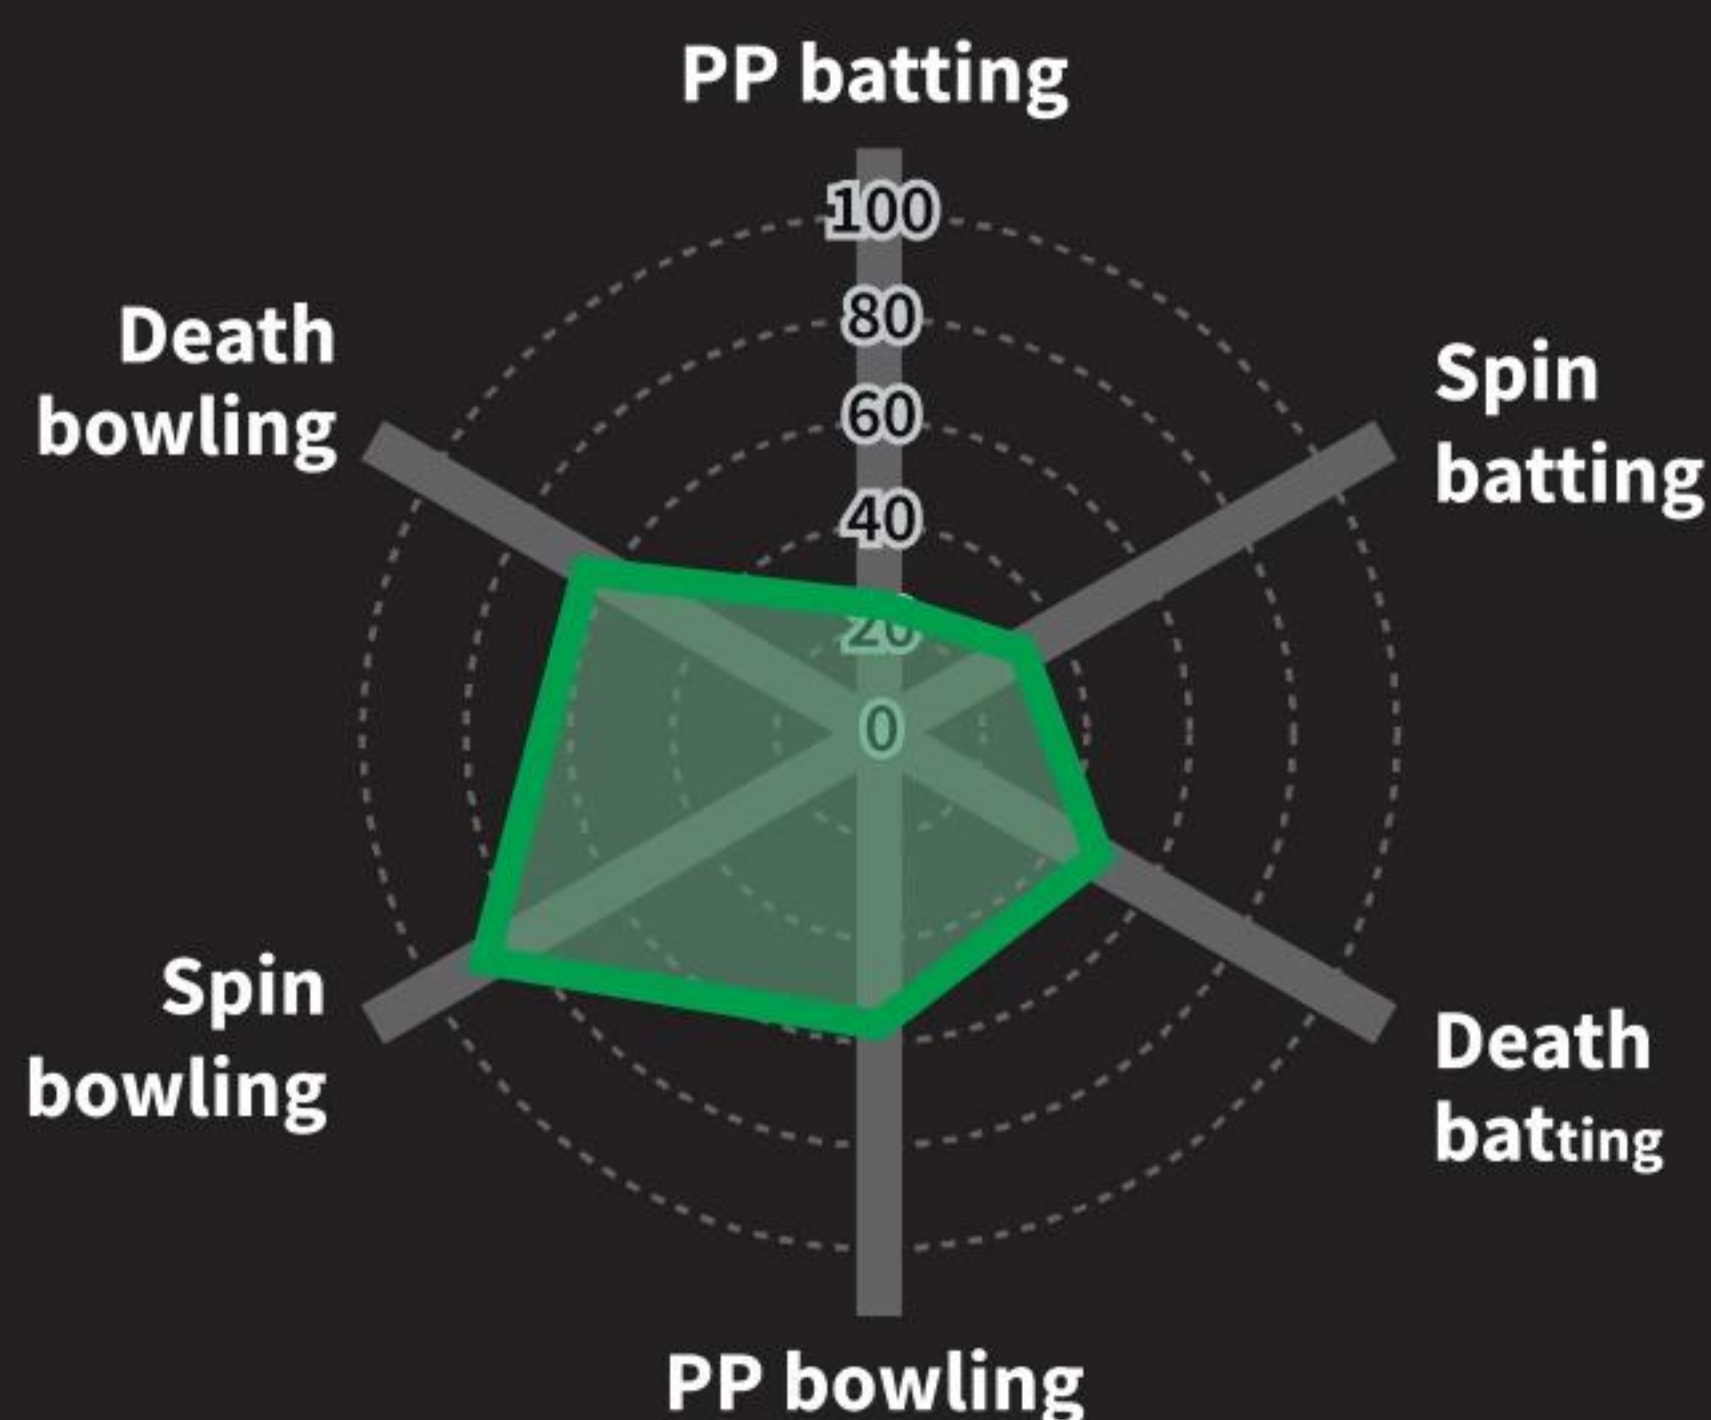

SOUTH AFRICA

- Good batting numbers against spin bowling
- Won just three matches out of nine in subcontinent conditions since the last World Cup
- Bowling has been expensive across all phases of play; the economy rate of spin is a major concern

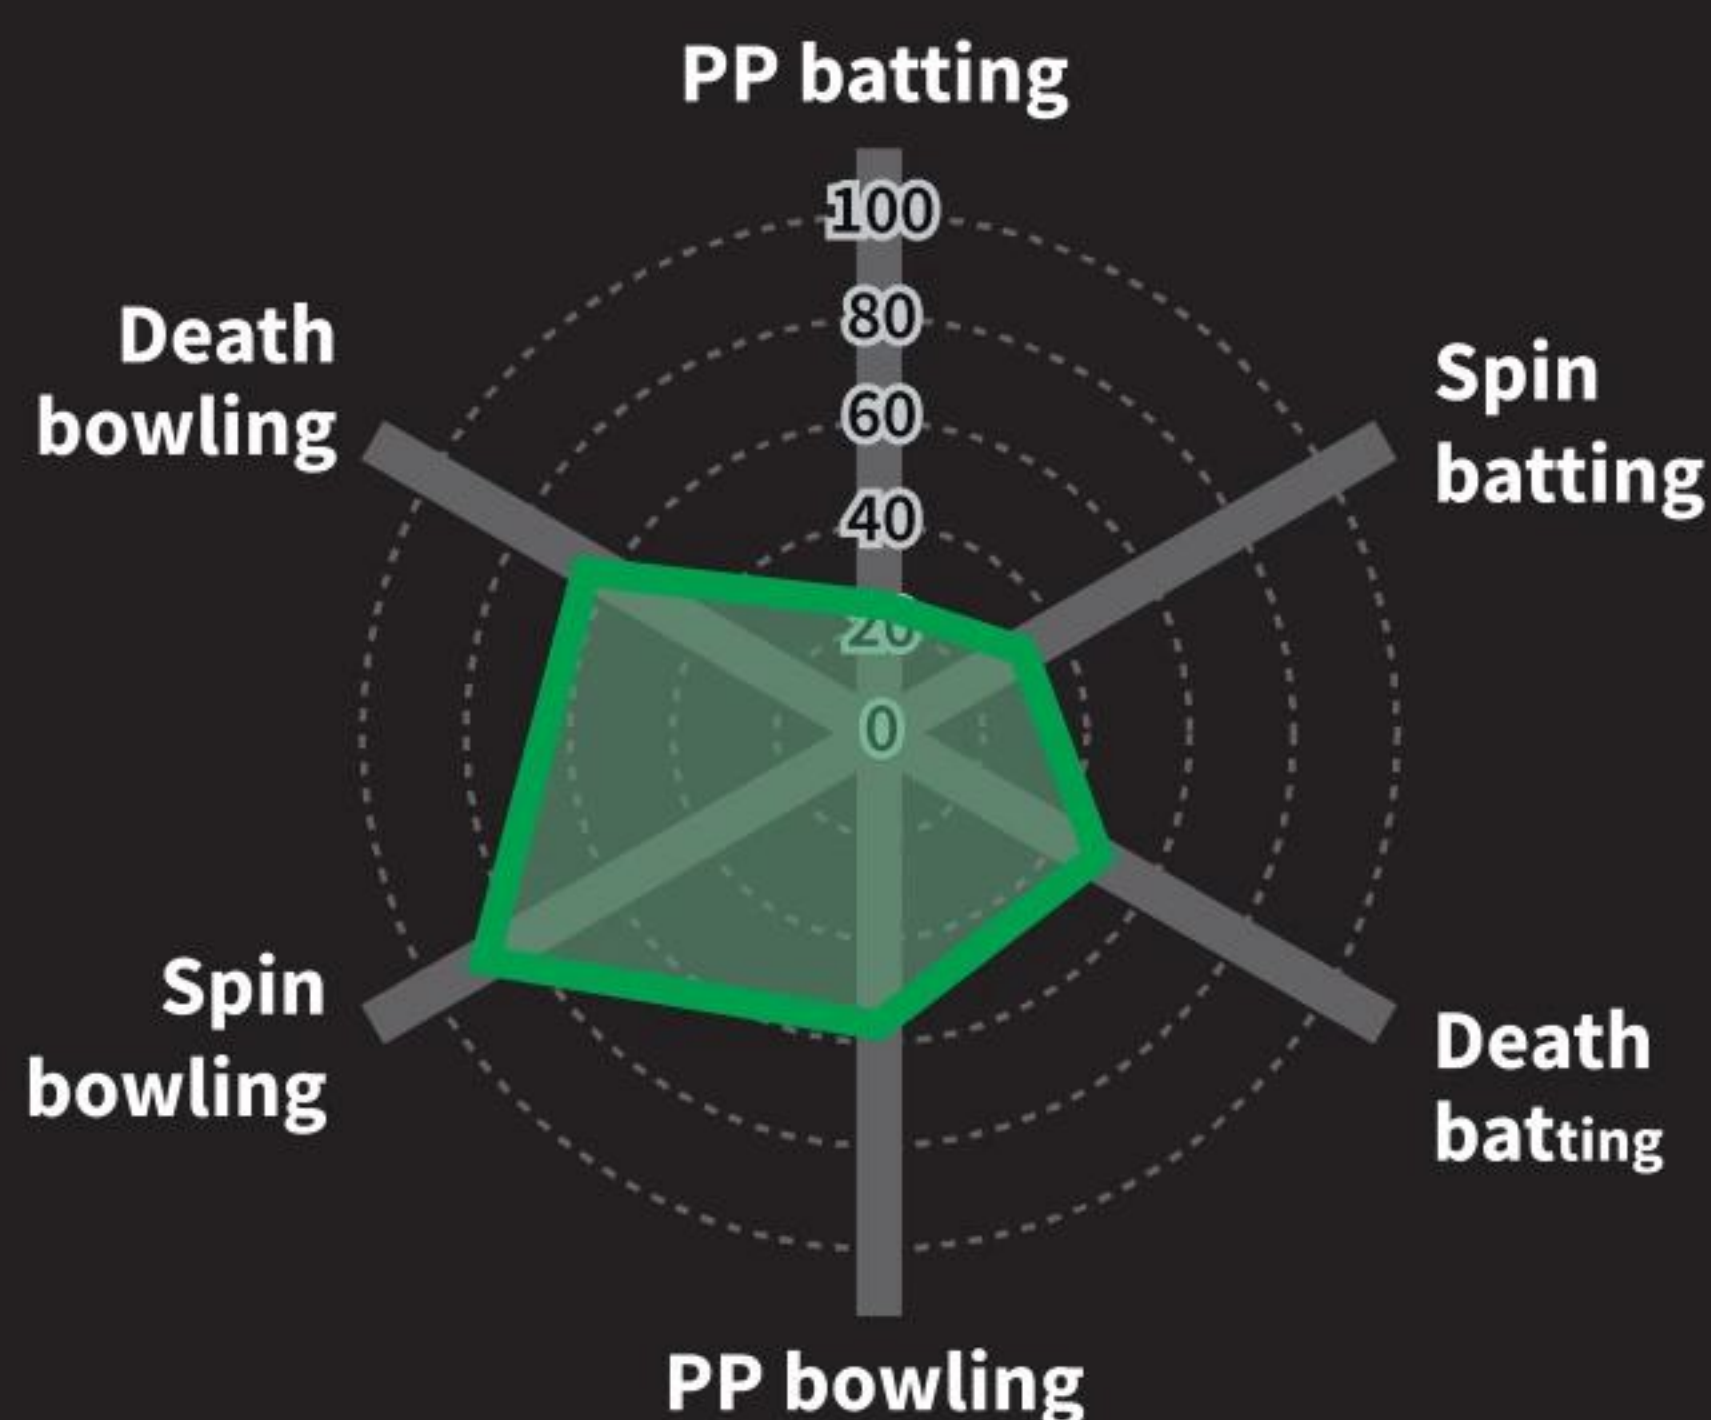

WEST INDIES

- One of the best-performing sides with the bat in the death overs
- Below average with both bat and ball when field restrictions are in place
- Economy rate with the ball during the death overs is relatively poor

SRI LANKA

- The first six overs are the strongest suit in batting, the worst-performing nation for strike rate against spin
- Good numbers with the ball in the PowerPlay, one of the better spin-bowling sides
- Extensive sub-continent experience with 24 out of 30 matches played in the region

PAKISTAN

- 21 out of 44 games played against lower-ranked sides
- Above-average bowling numbers across all phases, good spin-bowling attack
- The biggest weakness is a lack of impetus across the first three-quarters of the batting innings
