

Project 11, Clickbait Headline Generator: A humorous headline generator for your content farm.	51
<i>Practice string manipulation and text generation.</i>	
Project 12, Collatz Sequence: Explore the simplest impossible conjecture in mathematics.	56
<i>Learn about the modulus operator.</i>	
Project 13, Conway's Game of Life: The classic cellular automata whose simple rules produce complex emergent behavior.	59
<i>Use dictionary data structures and screen coordinates.</i>	
Project 14, Countdown: A countdown timer with a seven-segment display.	63
<i>Practice importing modules you create.</i>	
Project 15, Deep Cave: A tunnel animation that descends endlessly into the earth.	66
<i>Use string replication and simple math.</i>	
Project 16, Diamonds: An algorithm for drawing diamonds of various sizes.	69
<i>Practice your pattern recognition skills to create drawing algorithms.</i>	
Project 17, Dice Math: A visual dice-rolling math game.	73
<i>Use dictionary data structures for screen coordinates.</i>	
Project 18, Dice Roller: A tool for reading <i>Dungeons & Dragons</i> dice notation to generate random numbers.	79
<i>Parse text to identify key strings.</i>	
Project 19, Digital Clock: A clock with a calculator-like display.	83
<i>Generate numbers that match information from the <code>datetime</code> module.</i>	
Project 20, Digital Stream: A scrolling screensaver that resembles <i>The Matrix</i> .	86
<i>Experiment with different animation speeds.</i>	
Project 21, DNA Visualization: An endless ASCII-art double helix that demonstrates the structure of DNA.	90
<i>Work with string templates and randomly generated text.</i>	
Project 22, Ducklings: Mix and match strings to create a variety of ASCII-art ducks.	94
<i>Use object-oriented programming to create a data model for duck drawings.</i>
