

Project 23, Etching Drawer: Move the cursor to create line drawings. <i>Work with screen coordinates and relative directional movements.</i>	100
Project 24, Factor Finder: Find all the multiplicative factors of a number. <i>Use the modulus operator and Python's math module.</i>	106
Project 25, Fast Draw: Test your reflexes to see if you're the fastest keyboard in the West. <i>Learn about the keyboard buffer.</i>	110
Project 26, Fibonacci: Generate numbers in the famous Fibonacci sequence. <i>Implement a rudimentary mathematics algorithm.</i>	113
Project 27, Fish Tank: A colorful, animated ASCII-art fish tank. <i>Use screen coordinates, text colors, and data structures.</i>	117
Project 28, Flooder: Attempt to fill the entire puzzle board with one color. <i>Implement the flood fill algorithm.</i>	125
Project 29, Forest Fire Sim: Simulate the spread of wildfires through a forest. <i>Create a simulation with adjustable parameters.</i>	132
Project 30, Four in a Row: A board game where two players try to connect four tiles in a row. <i>Create a data structure that mimics gravity.</i>	137
Project 31, Guess the Number: The classic number guessing game. <i>Program basic concepts for beginners.</i>	143
Project 32, Gullible: A humorous program to keep gullible people busy for hours. <i>Use input validation and loops.</i>	147
Project 33, Hacking Minigame: Deduce a password based on clues. <i>Add cosmetic features to make a basic game more interesting.</i>	150
Project 34, Hangman and Guillotine: The classic word guessing game. <i>Use string manipulation and ASCII art.</i>	156
Project 35, Hex Grid: Programmatically generate tiled ASCII art. <i>Use loops to make repeating text patterns.</i>	162
