

Project 61, ROT13 Cipher: The simplest cipher for encrypting and decrypting text.	290
<i>Convert between letters and numbers to perform math on text.</i>	
Project 62, Rotating Cube: A rotating cube animation.	293
<i>Learn 3D rotation and line drawing algorithms.</i>	
Project 63, Royal Game of Ur: A 5,000-year-old game from Mesopotamia.	300
<i>Use ASCII art and string templates to draw a board game.</i>	
Project 64, Seven-Segment Display Module: A display like those used in calculators and microwave ovens.	308
<i>Create modules for use in other programs.</i>	
Project 65, Shining Carpet: Programmatically generate the carpet from <i>The Shining</i> .	312
<i>Use loops to make repeating text patterns.</i>	
Project 66, Simple Substitution Cipher: An encryption scheme more advanced than the Caesar cipher.	315
<i>Perform intermediate math on text.</i>	
Project 67, Sine Message: Display a scrolling wave message.	320
<i>Use a trigonometry function for animation.</i>	
Project 68, Sliding Tile Puzzle: The classic four-by-four tile puzzle.	323
<i>Employ a data structure to reflect the state of a game board.</i>	
Project 69, Snail Race: Fast-paced snail racing action!	329
<i>Calculate spacing for ASCII art snails.</i>	
Project 70, Soroban Japanese Abacus: A computer simulation of a pre-computer calculating tool.	333
<i>Use string templates to create an ASCII-art counting tool.</i>	
Project 71, Sound Mimic: Memorize an increasingly long pattern of sounds.	339
<i>Play sound files from a Python program.</i>	
Project 72, sPoNgEcAsE: Translates English messages into sPOnGEcAsE.	343
<i>Change the casing of letters in strings.</i>
