

```
218.  
219. # If this program was run (instead of imported), run the game:  
220. if __name__ == '__main__':  
221.     main()
```

---

After entering the source code and running it a few times, try making experimental changes to it. The comments marked with (!) have suggestions for small changes you can make. On your own, you can also try to figure out how to do the following:

- Add additional shapes and colors.
- Create other board shapes besides a rectangle.

## Exploring the Program

Try to find the answers to the following questions. Experiment with some modifications to the code and rerun the program to see what effect the changes have.

1. What error message do you get if you change `board = {}` on line 92 to `board = []`?
2. What error message do you get if you change `return board` on line 105 to `return None`?
3. What happens if you change `movesLeft -= 1` on line 76 to `movesLeft -= 0`?
