

The # characters represent walls, the S marks the start, and the E marks the exit. The # characters in bold represent walls that you can remove to form your maze. Don't remove the walls at odd-numbered columns and odd-numbered rows, and don't remove the borders of the maze. When you're done, save the maze as a *.txt* (text) file. It could look something like this:

Of course, this is a simple maze. You can make maze files of any size as long as they have an odd number of rows and columns. Be sure it'll still fit on the screen, though! You can also download maze files from <https://invpy.com/mazes/>.

When you run *mazerunner2d.py*, the output will look like this:

[illegible]
