

```

131.         bext.goto(logo[X], logo[Y])
132.         bext.fg(logo[COLOR])
133.         print('DVD', end='')
134.
135.     bext.goto(0, 0)
136.
137.     sys.stdout.flush() # (Required for bext-using programs.)
138.     time.sleep(PAUSE_AMOUNT)
139.
140.
141. # If this program was run (instead of imported), run the game:
142. if __name__ == '__main__':
143.     try:
144.         main()
145.     except KeyboardInterrupt:
146.         print()
147.         print('Bouncing DVD Logo, by Al Sweigart')
148.         sys.exit() # When Ctrl-C is pressed, end the program.

```

After entering the source code and running it a few times, try making experimental changes to it. The comments marked with (!) have suggestions for small changes you can make. On your own, you can also try to figure out how to do the following:

- Change `NUMBER_OF_LOGOS` to increase the number of bouncing logos on the screen.
- Change `PAUSE_AMOUNT` to speed up or slow down the logos.

Exploring the Program

Try to find the answers to the following questions. Experiment with some modifications to the code and rerun the program to see what effect the changes have.

1. What happens if you change `WIDTH, HEIGHT = bext.size()` on line 20 to `WIDTH, HEIGHT = 10, 5`?
2. What happens if you replace `DIR: random.choice(DIRECTIONS)` on line 52 with `DIR: DOWN_RIGHT`?
3. How can you make the 'Corner bounces:' text not appear on the screen?
4. What error message do you get if you delete or comment out `cornerBounces = 0` on line 57?
