CLICKBAIT HEADLINE GENERATOR

Our website needs to trick people into looking at advertisements! But coming up with creative, original content is too hard.

Luckily, with the clickbait headline generator, we can make a computer come up with millions of outrageous fake headlines. They're all low quality, but readers don't seem to mind. This program generates as many headlines as you need from a Mad Libs-style template.

There's a lot of text in this program for the headline templates, but the code itself is straightforward and suitable for beginners.
