

Django Models – Data Field Type

	Field	Stored Data
Strings	CharField	strings (need to specify max length)
	TextField	a large text
	SlugField	strings of alphabets, numbers, underscores or hyphens
	URLField	a URL (validated by URLValidator)
	EmailField	an email address (validated by EmailValidator)
Logic	BooleanField	True / False
Numbers	IntegerField	an integer
	PositiveIntegerField	a positive integer
	FloatField	a floating-point number
	DecimalField	a fixed-precision decimal number
	AutoField	an integer that automatically increments
Date & Time	DateField	a date
	DateTimeField	a date and time
	TimeField	a time
Files	ImageField	image file information (uploaded)
	FileField	file information (uploaded)

Fields are a crucial part of a **relational database** storing data. Each field determines a data type that can store a specific type of data. Django provides several field types. A field type is written in **PascalCase**. Some field types require specific arguments. For example, `max_length` is required for `CharField`. In this section, we'll explain key data field types.

1. Field types for strings

CharField

This field type is one of the most frequently used field types. This field can store small-to-large strings.

Key Arguments
