

Django Models – Help Text Option

models.py

```
filed_name = models.FieldType(help_text="text message")
```

The screenshot shows the 'Change division' form in the Django admin interface. The form has a title 'Change division' and a 'HISTORY' button. The current division is 'Product Development'. There is a text input field for 'Div name' with the value 'Product Development'. Below this is a checkbox labeled 'In scope'. A callout box labeled 'Help text message' points to the help text for this checkbox, which reads: 'If the division is target for the learning program, check this field.' At the bottom of the form are four buttons: 'Delete', 'Save and add another', 'Save and continue editing', and 'SAVE'.

Using the `help_text` field option, you can add a help text message in the Django admin site for the field. Its execution is straightforward. Add the `help_text` option with a text message you want to show.

Practice

Objective:

Add a new field in an existing model after data entry
