

How Django Handles HTTP Request and HTTP Response

To describe Django's role in web applications, it is crucial to know the basics of **HTTP requests** and **HTTP responses**. HTTP is a communication protocol used for websites or web applications.

The basic flow of browsing websites

The basic flow of browsing websites (without dynamic components) can be described in two simple steps.

Step 1: When a user clicks on a link or button in a web browser, the browser sends an HTTP request (URL) to a web server located at the address specified by the URL.
