

Template for Create and Update Page

You can use almost the same templates for the create page and update page. Those two pages should be designed to allow user data input with the form HTML tag.

In the most basic implementation, there are three key parts in the create and update page template.

1. A form with the `<input>` tag
2. `{{ form.as_p }}`
3. `{% csrf_token %}`

1. A form with an input tag
