

Template for Delete Page

The delete page is used to confirm or delete existing data. As the page requires an input form, the template is similar to the create and update page template.

In the most basic implementation, there are three key parts in the delete page template

1. A form with the `<input>` tag
2. `{% csrf_token %}`
3. A confirmation message with the name of the `object` to be deleted

As we already explained about the first two, we'll explain the last one in this section.
