

At this time, you don't need to copy the entire code. Just copy only the class. For example, `class="btn btn-primary"` for the primary color buttons.

Copy the class code and paste it into the relevant tags. For example, to adjust the Save button on the Create page, add the class with the `yellow` line below.

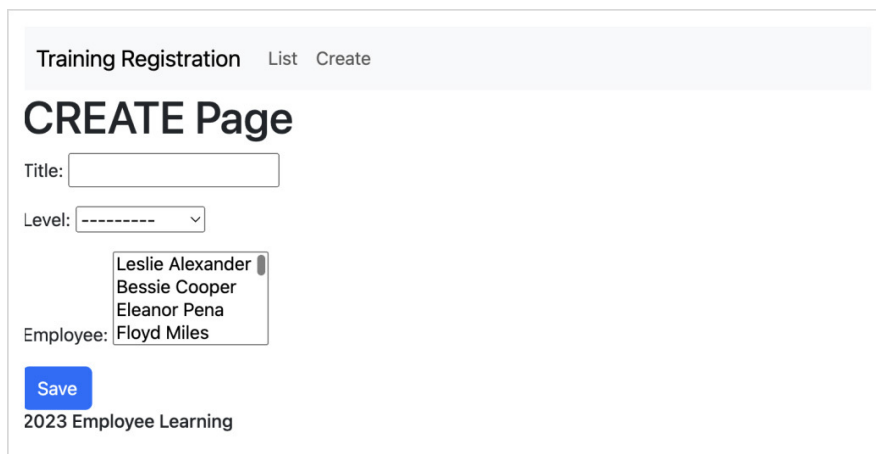

templates/course_create.html

```
<input type="submit" value="Save" class="btn btn-primary">
```

Do the same for all buttons based on the design principle.

4. Check the results

Go to the Create page. You can see that the button is already nicely styled.

Style the List page with a Card and Flex box

On the list page, there are multiple objects. Using Bootstrap, you can quickly make a card-style layout.

1. Find code for Bootstrap Cards

Code for Cards is available in the Cards section under Components on the left sidebar.
