

templates/employee_learning/course_create.html

```
{% extends "base.html" %}
{% load crispy_forms_tags %}
{% block body %}

<div class="container w-50" style="min-width:300px; max-width:
500px;">
  <h1 class="m-5 text-center"> CREATE Page </h1>
  <form method="post"> {% csrf_token %}

    {{ form|crispy }}

    <input type="submit" value="Save" class="btn btn-primary
d-block mx-auto">
  </form>
</div>

{% endblock %}
```

4. Check the results

To check the results in your browser, run the `runserver` command again.

Command Line - INPUT

```
(d_env) project_d % | python manage.py runserver
```

You can see that the Create and Update pages are nicely designed now.
