

```
<script  
src="https://cdn.jsdelivr.net/npm/bootstrap@5.3.0-  
alpha2/..."></script>
```

4. Add {% include %} tags in base.html

Add {% include %} tags with related HTML paths in the place where you cut the code. The *base.html* file becomes very simple, as shown below.

templates/base/base.html

```
<!doctype html>  
<html lang="en">  
<head>  
  <meta charset="utf-8">  
  <meta name="viewport" content="width=device-  
width, initial-scale=1">  
  <title>Employee Learning</title>  
  
  {% include "base/css_link.html" %}  
</head>  
  
<body>  
  
  {% include "base/navbar.html" %}  
  
  {% block body %}  
  <p>Insert body contents here</p>  
  {% endblock %}  
  
  {% include "base/footer.html" %}  
  
</body>  
</html>
```

Check the browser. As the actual code doesn't change, each page should stay the same.
