

- Use `{% static 'file path' %}` tag where you need to define the static file path. The file path should be written as a **relative path from the static directory**

Practice 1

Objective:

Learn how to add a CSS file

In this practice, we'll demonstrate how to add a custom CSS file.

1. Create static directories and edit settings.py

Follow the instructions for creating required directories and editing [settings.py](#) in the main section above.

2. Create a CSS file

Create the [custom.css](#) file under the css directory, and add a simple code like the one below.

`static/css/custom.css`

```
body {  
    background-color: lightblue  
}
```

3. Edit css_link.html

Add the `<link>` tag to make a link with the new [custom.css](#) file.

`templates/base/css_link.html`

```
<link rel="stylesheet" href="{% static  
'css/custom.css' %}">
```

4. Check the result
