```

5. Check the results

To check if the initial settings are appropriately done, execute the `runserver` command.

Command Line - INPUT

```
d_env) project_d % | python manage.py runserver
```

The user authentication pages are available at the URL written in the `urls.py` file under `allauth/account`. Check one of the URLs, for example, `http://localhost:8000/accounts/login/`. Although UIs do not look good, you can access the key pages for user authentications now.

The screenshot shows a web browser window with the address bar displaying `localhost:8000/accounts/login/`. The page content includes a "Menu:" section with links for [Sign In](#) and [Sign Up](#). Below this is a large "Sign In" heading. A message states: "If you have not created an account yet, then please [sign up](#) first." There are two input fields: "E-mail:" with a placeholder "E-mail address" and "Password:" with a placeholder "Password". Below the password field is a "Remember Me:" checkbox. At the bottom, there is a [Forgot Password?](#) link and a "Sign In" button.

Try to sign in. You will be directed to the home page if you can successfully sign in.
