

Clicks on the **Register a new application** button under the **OAuth Apps** menu.

There are three items you need to type in.

- **App Name:** Employee Learning (any name)
- **Homepage URL:** *http://localhost:8000*
- **Authorization callback URL:**
http://localhost:8000/accounts/github/login/callback/

You need to type the **Homepage URL** and **callback URL** carefully. Often, errors come from this setting. If you are using *127.0.0.1* for the *runserver* command, use *127.0.0.1* here as well. Another point you need to be careful about is the *accounts* part. Don't forget to put *s* at the end.
