

On the OAuth consent screen, select **External** and press the **CREATE** button.

The screenshot shows the Google Cloud console interface for configuring an OAuth consent screen. The left sidebar contains a menu with options: 'Enabled APIs and services', 'Library', 'Credentials', 'OAuth consent screen' (highlighted with a blue box), and 'Page usage agreements'. The main content area is titled 'OAuth consent screen' and includes instructions: 'Choose how you want to configure and register your app, including your target users. You can only associate one app with your project.' Under the 'User Type' section, there are two radio buttons: 'Internal' and 'External'. The 'External' option is selected and highlighted with a blue box. Below the radio buttons, there is a 'CREATE' button. At the bottom, there is a link: 'Let us know what you think about our OAuth experience'.

Add **App name**, **User support email**, and **Developer contact information** at the bottom.

The screenshot shows the 'Edit app registration' page in the Google Cloud console. The page has a progress bar at the top with four steps: '1 OAuth consent screen' (active), '2 Scopes', '3 Test users', and '4 Summary'. The main content area is titled 'App information' and includes the text: 'This shows in the consent screen, and helps end users know who you are and contact you'. There are three input fields, each highlighted with a blue box: 'App name *' with the value 'Employee Learning', 'User support email *' with a dropdown menu showing '@gmail.com', and 'Developer contact information' with a text input field containing '@gmail.com'. Below the input fields, there are two buttons: 'SAVE AND CONTINUE' and 'CANCEL'.

There is no need to add other information. Click on **Save And Continue** in the rest of the steps.
