

- **Authorized redirect URIs:**

*http://localhost:8000/accounts/google/login/callback/*

Carefully type, especially for **Authorized JavaScript origins** and **Authorized redirect URIs**.

- Authorized JavaScript origins is the Homepage URL in GitHub.
- Authorized redirect URIs is Authorization callback URL in GitHub.

Add the following information.

| Google                        | GitHub                     |
|-------------------------------|----------------------------|
| Authorized JavaScript origins | Homepage URL               |
| Authorized redirect URIs      | Authorization callback URL |

Often, error come from this setting. If you are using *127.0.0.1* for the *runserver* command, use *127.0.0.1* here as well. Another point you need to be careful about is the *accounts* part. Don't forget to put *s* at the end.
