

Add the following settings:

- **Provider:** GitHub
- **Name:** Any name
- **Client ID:** Client ID obtained from GitHub website
- **Secret Key:** Client secret obtained from GitHub website
- **Sites:** localhost:8000

Once it's done, save the record.

The screenshot shows the Django administration interface for adding a social application. The left sidebar contains a menu with categories: ACCOUNTS (Email addresses), AUTHENTICATION AND AUTHORIZATION (Groups, Users), EMPLOYEE_LEARNING (Divisions, Employees, Learning courses, Personal infos), SITES (Sites), and SOCIAL ACCOUNTS (Social accounts, Social application tokens, Social applications). The main content area is titled 'Add social application' and contains the following fields:

- Provider:** Google (selected from a dropdown)
- Name:** Google Social Login
- Client ID:** 393654551962-p8jvpcuc3nthm8ogaodnbn6knu7das1.apps.googleusercontent.com
- Secret key:** GOCSPX-knlwGKHxjSP67xhLM_5W050yVF1
- Key:** (empty)
- Sites:** localhost:8000 (selected from a list of available sites)

Once it's done, save the record.

4. Check the results

Go to the Sign In (Login) page (not the Sign Up page!) to check the results.

You can see the link named **Google**.
