

Login Required – LoginRequiredMixin

Login Required – LoginRequiredMixin

views.py

```
from django.contrib.auth.mixins import LoginRequiredMixin  
  
class MyList(LoginRequiredMixin, ListView):
```

Once you build **user authentication** functionalities, you may want to control web page access based on users' login status. You can implement this very quickly with *LoginRequiredMixin* in the **class-based view**.

LoginRequiredMixin

LoginRequiredMixin is used to check a user's login status and control page access based on the login status. Adding *LoginRequiredMixin* is very simple, and you just need to inherit *LoginRequiredMixin* in the class-based view, in which you want to control user access based on the login status.

Two steps to implement:

- Import *LoginRequiredMixin* from *django.contrib.auth.mixins*
- Add *LoginRequiredMixin* as a parent class of the view
