

Using a static IP address, you can continue to use the same IP address even when you delete the current instance. When you create a new instance, you just need to re-attach the static IP address to the new instance.

This static public IP address will be used for your **SSH** connection settings in the next section.

If you are not using a static IP address, the IP address will change every time you switch to a new instance. Using a static IP address gives you better operational efficiency as you don't need to re-set the SSH configuration.
