

1. Create the file repository configuration

Command Line - INPUT

```
ubuntu@ip-xx:~$ | sudo sh -c 'echo "deb
http://apt.postgresql.org/pub/repos/apt $(lsb_release -cs)-pgdg
main" > /etc/apt/sources.list.d/pgdg.list'
```

2. Import the repository signing key

Command Line - INPUT

```
ubuntu@ip-xx:~$ | wget --quiet -O -
https://www.postgresql.org/media/keys/ACCC4CF8.asc | sudo apt-key
add -
```

3. Update the package lists

Command Line - INPUT

```
ubuntu@ip-xx:~$ | sudo apt-get update
```

4. Install the latest version of PostgreSQL

Command Line - INPUT

```
ubuntu@ip-xx:~$ | sudo apt-get -y install postgresql
```

You can check if the PostgreSQL is properly installed and running. First, check the version installed by the `psql --version` command.

Command Line - INPUT

```
ubuntu@ip-xx:~$ | psql --version
```

Command Line - RESPONSE

```
psql (PostgreSQL) 15.2 (Ubuntu 15.2-1.pgdg20.04+1)
```

Using the `systemctl` command, check if PostgreSQL is running as a **demon process**.

Command Line - INPUT

```
ubuntu@ip-xx:~$ | systemctl status postgresql
```

Command Line - RESPONSE

```
● postgresql.service - PostgreSQL RDBMS
```
