

Django Production Settings (2) – Production Settings

 production.py

Key settings adjusted for production

DEBUG

ALLOWED_HOSTS

DATABASES

EMAIL_BACKEND and related settings

STATIC_ROOT and STATIC_URL

MEDIA_ROOT and MEDIA_URL

There are several settings you need to update for the production environment. In this section, we'll explain the critical ones. As confidential data should not be directly written in the settings files, you should use the `.env` file, which will be explained in the next section.

Here is the list of the critical settings you want to change for the production environment.

DEBUG

Change to **False**.
