

6. Check if the Django app is running

Note: For the Nginx setting, the virtual environment is not needed as it's directly installed on the OS.

Install Nginx

Install Nginx using the `apt-get` command.

Command Line - INPUT

```
ubuntu@ip-xx:~$ | sudo apt-get update
ubuntu@ip-xx:~$ | sudo apt-get install -y nginx
```

As Nginx runs when it is installed, check if it is running by the `systemctl status` command.

Command Line - INPUT

```
ubuntu@ip-xx:~$ | systemctl status nginx
```

Unless you encounter an issue, you'll see the message below.

Command Line - RESPONSE

```
● nginx.service - A high performance web server and a reverse
   proxy server
   Loaded: loaded (/lib/systemd/system/nginx.service; enabled;
   vendor preset: enabled)
   Active: active (running) since Fri 2023-04-21 16:05:47 UTC; 21h
   ago
   Docs: man:nginx(8)
   Process: 123945 ExecStartPre=/usr/sbin/nginx -t -q -g daemon on;

```

Add an Nginx configuration file

Nginx has several configuration setting points.

1. **nginx.conf file:** the original settings are written here. Usually, we don't touch this file.
2. **conf.d directory:** you can save your custom configuration file in this directory. The *nginx.conf* file will include your custom
