Domain assignments

Use assignments to point a domain to your Lightsail resources, such as load balancers and instances.
[Learn more about domain assignments](#)

Assign this domain to a resource.

+ Add assignment

Select a domain name

☒ example.com

☐ A subdomain of example.com

☐ All subdomains of example.com

Select a resource

Staticip-1

Select the address

[Learn more about IP addresses](#)

☒ Static IP address

☐ IPv6 address

Result

employee-learning.site will resolve to Staticip-1, which is attached to this instance.

CancelAssign

After assigning it, you can check the **DNS record** tab. You can see that the A record has been added.

DNS records

Each record in a DNS zone defines how you want to route internet traffic for your domain. For example, you can add DNS records that route traffic to your Lightsail resources, another domain, or a mail server.

A RECORDS

Record name	Route traffic to	
example.com	XX.XX.XX.XX	 

Register the NS records at the DNS hosting provider

Next, you need to go back to the DNS hosting provider's web site to add the NS records. Usually, you can register NS records on the account pages of hosting providers. Login with your account and find a page where you can add your NS records.
