

No need to edit the settings file unless you are using a different `SITE_ID`

Note: `SITE_ID` is the Django ID for the site table in the Django admin.

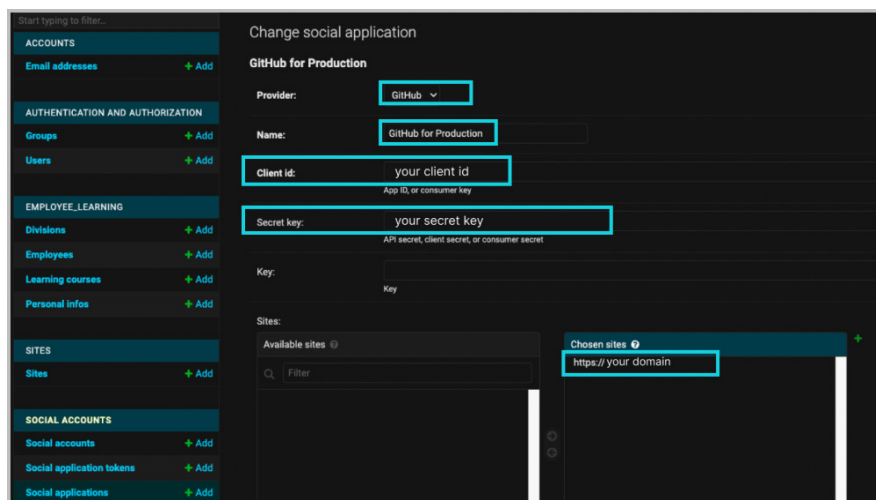

3. Register in Django Admin

- **On the Sites page:** Update the *example.com* (*SITE ID=1*) to your domain and new display name. If you add other site data (instead of updating *example.com*), you must change `SITE_ID` in the settings file. The updated display name will be shown in the verification email.

The screenshot shows the 'Change site' form in the Django Admin interface. On the left is a sidebar with a search bar and a list of model categories: ACCOUNTS (Email addresses), AUTHENTICATION AND AUTHORIZATION (Groups, Users), EMPLOYEE_LEARNING (Divisions, Employees, Learning courses, Personal infos), SITES (Sites), and SOCIAL ACCOUNTS (Social accounts, Social application tokens, Social applications). The main area is titled 'Change site' and shows the current site's details. The 'Domain name' field is set to 'https:// your domain' and the 'Display name' field is set to 'For Production'. At the bottom right, there are buttons for 'Delete', 'Save and add another', 'Save and continue editing', and 'SAVE'. A 'HISTORY' button is also visible in the top right corner.

- **On the Social applications page:** Use the new **Client ID** and **Secret Key** from the new OAuth app. Add the site with your domain name.

The screenshot shows the 'Change social application' form in the Django Admin interface. The sidebar is identical to the previous screenshot. The main area is titled 'Change social application' and shows details for a 'GitHub for Production' application. The 'Provider' is set to 'GitHub', the 'Name' is 'GitHub for Production', the 'Client id' is 'your client id', and the 'Secret key' is 'your secret key'. Below these fields, there is a 'Key' field and a 'Sites' section. The 'Sites' section has two tabs: 'Available sites' and 'Chosen sites'. The 'Chosen sites' tab is active, showing a list of sites with a search bar and a filter button. The first site in the list is 'https:// your domain'.
