

```
:  
Successfully installed pip-23.0.1
```

After upgrading the `pip`, run the `pip` command. Ensure that the virtual environment is active when running the `pip` command. If your command line prompt starts with `(virtual environment name)`, the virtual environment is active. Here is a command example.

Command Line - INPUT

```
(d_env) project_d | pip install -r requirements.txt
```

You'll see that the specific version of Django is installed along with some required libraries.

Command Line - RESPONSE

```
:  
Successfully installed Django-4.1.7 asgiref-3.6.0 sqlparse-0.4.3
```
