

Table 9.1 Common management commands that are built into Django (*continued*)

Command	App	Description
<code>clearsessions</code>	<code>sessions</code>	Removes expired sessions from the database
<code>collectstatic</code>	<code>staticfiles</code>	Copies static files to the configured
<code>compilemessages</code>	<code>django</code>	Used to create translation files
<code>createcachetable</code>	<code>django</code>	Creates a database table to be used for page caching
<code>createsuperuser</code>	<code>auth</code>	Creates a superuser (admin) account in the database
<code>dbshell</code>	<code>django</code>	Opens your database's command-line tool
<code>diffsettings</code>	<code>django</code>	Displays differences between your settings and the defaults
<code>dumpdata</code>	<code>django</code>	Exports data from the database into a fixture
<code>findstatic</code>	<code>staticfiles</code>	Searches for a named static file and prints its details
<code>flush</code>	<code>django</code>	Removes all data from the database except migration state
<code>inspectdb</code>	<code>django</code>	Outputs a <code>models.py</code> file based on an existing table
<code>loaddata</code>	<code>django</code>	Imports a fixture into the database
<code>makemessages</code>	<code>django</code>	Builds translation files based on strings in the source
<code>makemigrations</code>	<code>django</code>	Creates migration files based on changes to Models
<code>migrate</code>	<code>django</code>	Performs migrations on the database
<code>optimizemigration</code>	<code>django</code>	Optimizes a migration file
<code>remove_stale_contenttypes</code>	<code>contenttypes</code>	Removes unused content type entries if the <code>contenttypes</code> app is in use
<code>runserver</code>	<code>django</code>	Runs the development server
<code>sendtestemail</code>	<code>django</code>	Sends a test email
<code>shell</code>	<code>django</code>	Runs a Django-aware REPL
<code>showmigrations</code>	<code>django</code>	Shows migrations in a project
<code>sqlflush</code>	<code>django</code>	Prints the SQL commands that are run when the <code>flush</code> management command executes
<code>sqlmigrate</code>	<code>django</code>	Prints the SQL for a named migration
<code>sqlsequencereset</code>	<code>django</code>	Prints the SQL for resetting an index sequence
<code>squashmigrations</code>	<code>django</code>	Squishes multiple migrations into a single file
<code>startapp</code>	<code>django</code>	Creates a new Django app directory
<code>startproject</code>	<code>django</code>	Creates a new Django project
<code>test</code>	<code>django</code>	Runs unit tests
<code>testserver</code>	<code>django</code>	Runs a development server but using a test database populated with the named fixture's deployment destination
