

API vs. library vs. framework vs. SDK vs. engine, [130](#)

`append()` method, using, [115](#)

applications, opening, [22](#)

arguments. *See also* positional arguments

vs. parameters, [128](#)

passing to functions, [166–167](#)

setting defaults for parameters, [142–143](#)

arrow (`->`), using with type hints, [191](#)

ASCII (American Standard Code for Information Interchange), [146](#)

ASCII art, using in Four-in-a-Row game, [272](#)

`AsciiArt` class, creating, [304–305](#)

assignment and comparison operators, chaining, [104–105](#)

atoms and literals, [110](#)

attributes

as backing fields, [317–318](#)

defined, [278](#), [282–284](#)

vs. properties, [128–129](#)

turning into properties, [316–319](#)

vs. variable, [124](#)

B

backing field, relationship to attributes, [317–318](#)

backporting type hints, [196](#)

backslash (`\`)

purpose of, [18](#)

using with strings, [97](#)
