

- `if` statement as clause header, [124](#)
- immutable and mutable objects, [114–117](#), [144](#)
- `in` operator, using with values of variables, [105](#)
- increment and decrement operators, [156–157](#)
- indentation, using space characters for, [47–48](#). *See also* significant indentation
- index operator (`[]`), using, [117–118](#)
- `index()` string method, exception related to, [179](#)
- indexes, defined, [117–119](#)
- inequality `!=` operators, avoiding chaining, [149–150](#)
- inheritance. *See also* classes; multiple inheritance; OOP (object-oriented programming)
 - base classes, [296](#)
 - best practice, [308–309](#)
 - class attributes, [306–307](#)
 - class methods, [304–306](#)
 - vs. composition, [299–301](#)
 - creating child classes, [294](#)
 - derived classes, [296](#)
 - downside, [301–303](#)
 - explained, [293](#)
 - `isinstance()` and `issubclass()` functions, [303–304](#)
 - MRO (method resolution order), [310–312](#)
 - overriding methods, [296–297](#)
 - static methods, [306–307](#)
 - subclasses, [296](#)
 - super classes, [296](#)
