

```
drwxr-xr-x  2 al   al   4096 Aug  4 17:33 Desktop
--snip--
```

---

The Windows analog to `ls -al` is the `dir` command. Here's an example in a Windows terminal window:

---

```
C:\Users\Al>dir
Volume in drive C is Windows
Volume Serial Number is DFF3-8658

Directory of C:\Users\Al

06/12/2019  05:18 PM    <DIR>          .
06/12/2019  05:18 PM    <DIR>          ..
12/04/2018  07:16 PM    <DIR>          .android
--snip--
08/31/2018  12:47 AM                14,618 projectz.ipynb
10/29/2014  04:34 PM               121,474 foo.jpg
```

---

## List Subfolder Contents with `dir /s` and `find`

On Windows, running `dir /s` displays the cwd's folders and their subfolders. For example, the following command displays every `.py` file in my `C:\github\ezgmail` folder and all of its subfolders:

---

```
C:\github\ezgmail>dir /s *.py
Volume in drive C is Windows
Volume Serial Number is DEE0-8982

Directory of C:\github\ezgmail

06/17/2019  06:58 AM                1,396 setup.py
                        1 File(s)                1,396 bytes

Directory of C:\github\ezgmail\docs

12/07/2018  09:43 PM                5,504 conf.py
                        1 File(s)                5,504 bytes

Directory of C:\github\ezgmail\src\ezgmail

06/23/2019  07:45 PM               23,565 __init__.py
12/07/2018  09:43 PM                56 __main__.py
```
