Total Files Listed:

4 File(s) 30,521 bytes

0 Dir(s) 505,407,283,200 bytes free

The `find . -name` command does the same thing on macOS and Linux:

```
al@ubuntu:~/Desktop$ find . -name "*.py"
./someSubFolder/eggs.py
./someSubFolder/bacon.py
./spam.py
```

The `.` tells `find` to start searching in the cwd. The `-name` option tells `find` to find folders and filenames by name. The `"*.py"` tells `find` to display folders and files with names that match the `*.py` pattern. Note that the `find` command requires the argument after `-name` to be enclosed in double quotes.

Copy Files and Folders with `copy` and `cp`

To create a duplicate of a file or folder in a different directory, run `copy [source file or folder][destination folder]` OR `cp [source file or folder][destination folder]`. Here's an example in a Linux terminal window:

```
al@ubuntu:~/someFolder$ ls
hello.py  someSubFolder
al@ubuntu:~/someFolder$ cp hello.py someSubFolder
al@ubuntu:~/someFolder$ cd someSubFolder
al@ubuntu:~/someFolder/someSubFolder$ ls
hello.py
```
