

In general, I advise against putting comments at the end of a code line, because they can make the line too lengthy to read onscreen.

Vertical Spacing

Vertical spacing is the placement of blank lines between lines of code. Just as a new paragraph in a book keeps sentences from forming a wall of text, vertical spacing can group certain lines of code together and separate those groups from one another.

PEP 8 has several guidelines for inserting blank lines in code: it states that you should separate functions with two blank lines, classes with two blank lines, and methods within a class with one blank line. Black automatically follows these rules by inserting or removing blank lines in your code, turning this code:

```
NO: class ExampleClass:
    def exampleMethod1():
        pass
    def exampleMethod2():
        pass
def exampleFunction():
    pass
```

. . . into this code:

```
YES: class ExampleClass:
    def exampleMethod1():
        pass

    def exampleMethod2():
        pass

def exampleFunction():
    pass
```
