

and visualize data. Learning to make visualizations allows you to explore the field of data science, which is one of the highest-demand areas of programming today.

Web Applications

In the Web Application project (**Chapters 18, 19, and 20**), you'll use the Django package to create a simple web application that allows users to keep a journal about different topics they've been learning about. Users will create an account with a username and password, enter a topic, and then make entries about what they're learning. You'll also deploy your app to a remote server so anyone in the world can access it.

After completing this project, you'll be able to start building your own simple web applications, and you'll be ready to delve into more thorough resources on building applications with Django.
