

```

    # Get rid of any remaining bullets and aliens.
    ❷ self.bullets.empty()
    self.aliens.empty()

    # Create a new fleet and center the ship.
    ❸ self._create_fleet()
    self.ship.center_ship()

```

We reset the game statistics ❶, which gives the player three new ships. Then we set `game_active` to `True` so the game will begin as soon as the code in this function finishes running. We empty the aliens and bullets groups ❷, and then we create a new fleet and center the ship ❸.

Now the game will reset properly each time you click Play, allowing you to play it as many times as you want!

Deactivating the Play Button

One issue with our Play button is that the button region on the screen will continue to respond to clicks even when the Play button isn't visible. If you click the Play button area by accident after a game begins, the game will restart!

To fix this, set the game to start only when `game_active` is `False`:

```

alien
_invasion.py
def _check_play_button(self, mouse_pos):
    """Start a new game when the player clicks Play."""
    ❶ button_clicked = self.play_button.rect.collidepoint(mouse_pos)
    ❷ if button_clicked and not self.game_active:
        # Reset the game statistics.
        self.stats.reset_stats()
        --snip--

```

The flag `button_clicked` stores a `True` or `False` value ❶, and the game will restart only if Play is clicked *and* the game is not currently active ❷. To test this behavior, start a new game and repeatedly click where the Play button should be. If everything works as expected, clicking the Play button area should have no effect on the gameplay.

Hiding the Mouse Cursor

We want the mouse cursor to be visible when the game is inactive, but once play begins, it just gets in the way. To fix this, we'll make it invisible when the game becomes active. We can do this at the end of the `if` block in `_check_play_button()`:

```

alien_invasion.py
def _check_play_button(self, mouse_pos):
    """Start a new game when the player clicks Play."""
    button_clicked = self.play_button.rect.collidepoint(mouse_pos)
    if button_clicked and not self.game_active:
        --snip--
        # Hide the mouse cursor.
        pygame.mouse.set_visible(False)

```
