

because when the aliens move faster across the screen, they'll also come down the screen faster.

To increase the speeds of the ship, bullets, and aliens each time the player reaches a new level, we'll write a new method called `increase_speed()`:

```
settings.py    def increase_speed(self):
                """Increase speed settings."""
                self.ship_speed *= self.speedup_scale
                self.bullet_speed *= self.speedup_scale
                self.alien_speed *= self.speedup_scale
```

To increase the speed of these game elements, we multiply each speed setting by the value of `speedup_scale`.

We increase the game's tempo by calling `increase_speed()` in `_check_bullet_alien_collisions()` when the last alien in a fleet has been shot down:

```
alien_invasion.py def _check_bullet_alien_collisions(self):
                    --snip--
                    if not self.aliens:
                        # Destroy existing bullets and create new fleet.
                        self.bullets.empty()
                        self._create_fleet()
                        self.settings.increase_speed()
```

Changing the values of the speed settings `ship_speed`, `alien_speed`, and `bullet_speed` is enough to speed up the entire game!

Resetting the Speed

Now we need to return any changed settings to their initial values each time the player starts a new game; otherwise, each new game would start with the increased speed settings of the previous game:

```
alien_invasion.py def _check_play_button(self, mouse_pos):
                    """Start a new game when the player clicks Play."""
                    button_clicked = self.play_button.rect.collidepoint(mouse_pos)
                    if button_clicked and not self.game_active:
                        # Reset the game settings.
                        self.settings.initialize_dynamic_settings()
                    --snip--
```

Playing *Alien Invasion* should be more fun and challenging now. Each time you clear the screen, the game should speed up and become slightly more difficult. If the game becomes too difficult too quickly, decrease the value of `settings.speedup_scale`. Or if the game isn't challenging enough, increase the value slightly. Find a sweet spot by ramping up the difficulty in a reasonable amount of time. The first couple of screens should be easy, the next few should be challenging but doable, and subsequent screens should be almost impossibly difficult.
