

```
4         # Prepare the initial score image.
        self.prep_score()
```

Because Scoreboard writes text to the screen, we begin by importing the `pygame.font` module. Next, we give `__init__()` the `ai_game` parameter so it can access the settings, screen, and stats objects, which it will need to report the values we're tracking ❶. Then we set a text color ❷ and instantiate a font object ❸.

To turn the text to be displayed into an image, we call `prep_score()` ❹, which we define here:

```
scoreboard.py    def prep_score(self):
                  """Turn the score into a rendered image."""
                  ❶ score_str = str(self.stats.score)
                  ❷ self.score_image = self.font.render(score_str, True,
                    self.text_color, self.settings.bg_color)

                  # Display the score at the top right of the screen.
                  ❸ self.score_rect = self.score_image.get_rect()
                  ❹ self.score_rect.right = self.screen_rect.right - 20
                  ❺ self.score_rect.top = 20
```

In `prep_score()`, we turn the numerical value `stats.score` into a string ❶ and then pass this string to `render()`, which creates the image ❷. To display the score clearly onscreen, we pass the screen's background color and the text color to `render()`.

We'll position the score in the upper-right corner of the screen and have it expand to the left as the score increases and the width of the number grows. To make sure the score always lines up with the right side of the screen, we create a rect called `score_rect` ❸ and set its right edge 20 pixels from the right edge of the screen ❹. We then place the top edge 20 pixels down from the top of the screen ❺.

Then we create a `show_score()` method to display the rendered score image:

```
scoreboard.py    def show_score(self):
                  """Draw score to the screen."""
                  self.screen.blit(self.score_image, self.score_rect)
```

This method draws the score image onscreen at the location `score_rect` specifies.

Making a Scoreboard

To display the score, we'll create a `Scoreboard` instance in `AlienInvasion`. First, let's update the import statements:

```
alien_invasion.py --snip--
from game_stats import GameStats
from scoreboard import Scoreboard
--snip--
```
