

Next, we make an instance of Scoreboard in `__init__()`:

alien_invasion.py

```
def __init__(self):
    --snip--
    pygame.display.set_caption("Alien Invasion")

    # Create an instance to store game statistics,
    # and create a scoreboard.
    self.stats = GameStats(self)
    self.sb = Scoreboard(self)
    --snip--
```

Then we draw the scoreboard onscreen in `_update_screen()`:

alien_invasion.py

```
def _update_screen(self):
    --snip--
    self.aliens.draw(self.screen)

    # Draw the score information.
    self.sb.show_score()

    # Draw the play button if the game is inactive.
    --snip--
```

We call `show_score()` just before we draw the Play button.

When you run *Alien Invasion* now, a 0 should appear at the top right of the screen. (At this point, we just want to make sure the score appears in the right place before developing the scoring system further.) Figure 14-2 shows the score as it appears before the game starts.

Next, we'll assign point values to each alien!

Figure 14-2: The score appears at the top-right corner of the screen.
