

Here's the `prep_high_score()` method:

```
scoreboard.py def prep_high_score(self):
    """Turn the high score into a rendered image."""
    ❶ high_score = round(self.stats.high_score, -1)
    high_score_str = f"{high_score:}"
    ❷ self.high_score_image = self.font.render(high_score_str, True,
        self.text_color, self.settings.bg_color)

    # Center the high score at the top of the screen.
    self.high_score_rect = self.high_score_image.get_rect()
    ❸ self.high_score_rect.centerx = self.screen_rect.centerx
    ❹ self.high_score_rect.top = self.score_rect.top
```

We round the high score to the nearest 10 and format it with commas ❶. We then generate an image from the high score ❷, center the high score rect horizontally ❸, and set its top attribute to match the top of the score image ❹.

The `show_score()` method now draws the current score at the top right and the high score at the top center of the screen:

```
scoreboard.py def show_score(self):
    """Draw score to the screen."""
    self.screen.blit(self.score_image, self.score_rect)
    self.screen.blit(self.high_score_image, self.high_score_rect)
```

To check for high scores, we'll write a new method, `check_high_score()`, in `Scoreboard`:

```
scoreboard.py def check_high_score(self):
    """Check to see if there's a new high score."""
    if self.stats.score > self.stats.high_score:
        self.stats.high_score = self.stats.score
        self.prep_high_score()
```

The method `check_high_score()` checks the current score against the high score. If the current score is greater, we update the value of `high_score` and call `prep_high_score()` to update the high score's image.

We need to call `check_high_score()` each time an alien is hit after updating the score in `_check_bullet_alien_collisions()`:

```
alien_invasion.py def _check_bullet_alien_collisions(self):
    --snip--
    if collisions:
        for aliens in collisions.values():
            self.stats.score += self.settings.alien_points * len(aliens)
            self.sb.prep_score()
            self.sb.check_high_score()
    --snip--
```

We call `check_high_score()` when the `collisions` dictionary is present, and we do so after updating the score for all the aliens that have been hit.
