

Next, we need to modify Scoreboard to create a group of ships we can display. Here are the import statements for Scoreboard:

```
scoreboard.py import pygame.font
               from pygame.sprite import Group

               from ship import Ship
```

Because we're making a group of ships, we import the Group and Ship classes.

Here's `__init__()`:

```
scoreboard.py def __init__(self, ai_game):
               """Initialize scorekeeping attributes."""
               self.ai_game = ai_game
               self.screen = ai_game.screen
               --snip--
               self.prep_level()
               self.prep_ships()
```

We assign the game instance to an attribute, because we'll need it to create some ships. We call `prep_ships()` after the call to `prep_level()`.

Here's `prep_ships()`:

```
scoreboard.py def prep_ships(self):
               """Show how many ships are left."""
               ❶ self.ships = Group()
               ❷ for ship_number in range(self.stats.ships_left):
                   ship = Ship(self.ai_game)
                   ❸ ship.rect.x = 10 + ship_number * ship.rect.width
                   ❹ ship.rect.y = 10
                   ❺ self.ships.add(ship)
```

The `prep_ships()` method creates an empty group, `self.ships`, to hold the ship instances ❶. To fill this group, a loop runs once for every ship the player has left ❷. Inside the loop, we create a new ship and set each ship's *x*-coordinate value so the ships appear next to each other with a 10-pixel margin on the left side of the group of ships ❸. We set the *y*-coordinate value 10 pixels down from the top of the screen so the ships appear in the upper-left corner of the screen ❹. Then we add each new ship to the group ships ❺.

Now we need to draw the ships to the screen:

```
scoreboard.py def show_score(self):
               """Draw scores, level, and ships to the screen."""
               self.screen.blit(self.score_image, self.score_rect)
               self.screen.blit(self.high_score_image, self.high_score_rect)
               self.screen.blit(self.level_image, self.level_rect)
               self.ships.draw(self.screen)
```
